

WASTEWATER TREATMENT PLANT IMPROVEMENTS

The City has begun the process to get the new wastewater facility plan moving forward. The project will bring the current plant up into conformance with the Iowa Department of Natural Resource "IDNR" requirements as well add some additional capacity which will allow for future business and residential growth within Algona. The project consists of an expansion of the existing wastewater treatment plant, replacing aging equipment and expanding the existing wastewater treatment facility to meet new effluent requirements from the IDNR. Tentative design schedule is to begin design early spring 2009, bid project around spring 2010 and complete construction around the end of 2010.
